Forecasting weather hazards

Weather Impact

We offer global solutions for local weather challenges

Weather Impact is a global weather company specializing in anticipating the risks of extreme weather and climate change. We are active in industries where daily business is influenced by weather, and particularly by extreme weather. Weather Impact provides reliable data and analyses to support our clients' critical decision-making. Our solutions aim to mitigate risks by providing timely global weather alerts. Our products are user-friendly and based on global forecasting and satellite monitoring data, combined with local data and expertise.

Example products

Weather Impact delivers real-time weather data, translated into actionable information. Our products enable customers to reduce weather related damages and manage the risks of climate change. Our services are available world wide, examples are:

- Tailored weather forecasts
- Monitoring of weather hazards
- Alerts for extreme weather
- Weather risks for crops
- Regional climate bulletins
- Applied climate projections

Our Services

Weather Analytics

At Weather Impact we are driven to understand how weather affects your organisation. Our aim is to save resources and optimize production. Our products and services powerfully integrate field level knowledge with global weather data. We deliver real-time weather analytics for your organisation or your customers. Information can be shared as raw data, actable information or fully developed applications on the web or your smartphone.

We capture tens of millions points of data across the globe each day to
create smart weather solutions

Extreme Weather Alerts

Extreme weather conditions such as heavy rain, storm and extreme temperatures are monitored worldwide by our meteorologists and warning systems. For each client, tailored and personal risk-thresholds can be determined to ensure timely and relevant alerts. The flexibility of our systems also allows the alerts to be issued for secondary weather impacts, like crop development. In addition, local data can be integrated into our (global) products.

Weather Impact has state of the art knowledge about the (local) impacts of
climate change on your organization

Climate Change Services

Climate change is now recognized as the major environmental challenge of the 21st century. It is a growing crisis with economic, health and safety, food production, security and other dimensions. Temperatures will rise and extreme weather events will become more intense and happen more frequent. Our consulting team gives advice to private and public sector clients on how to make their projects, policies and assets resilient to climate change. Weather Impact understands the impacts of climate change on business. Our climate services strengthen strategic decisions, competitive advantage and global supply chains.

HydroNET

We develop our products in HydroNET, a decision-support service that provides intelligent solutions for operational and strategic water management. Smart web applications compose, analyze and visualize weather and water information in a series of useful maps and graphs. These empower water professionals to make better decisions for sustainable management of their resources. HydroNET was developed by our business partner HydroLogic and is being used by partners in our community of over 130 organizations to develop new weather and water applications. HydroNET is currently helping to manage water resources in nine countries around the world.
